

Issue 1200 hrs
3 Dec.

SECURITY
8th Long Course.

SIBI Exercise.

Narrative I

1. On morning of 5 Dec, GOC 4 Ind Div was warned that 4 Ind Div was to move by rd to area QUETTA. He himself was to report at once to HQ 1 Ind Corps at QUETTA, where full instrs would be issued.

The div comd took with him to QUETTA the following offrs, so that they could look at the rd and the new area.

AA & QMG
GSO II
DAAG
SC (Q)

CRE and one fd Engr
Rep div sigs
Rep RA (AA).

2. On arrival in QUETTA on the evening 5 Dec he received the following orders from the Corps Comd:-

"I had hoped to get your div up here by rail - unfortunately, however, the JAP air force last night hit a br on the rly running from SIBI to QUETTA via HARNAI (12 miles NORTH of NE Corner $\frac{1}{4}$ inch map). Consequently all my adm traffic has been thrown onto the BOLAN rly, and I can only send your carriers by rail.

I don't imagine that your 2nd line tpt will be of great value to you for tp carrying as you have two 15 cwt coys - I can however give you two GP coys type B which are on the way up from KARACHI and will report to your HQ tomorrow or the day after.

3. I'd like your div up here as soon as possible and we can let you have the rd to yourselves from 9 Dec. The AOC tells me that he cannot guarantee you immunity from air attack in defiles on your way up. The raids so far carried out on the BOLAN have apparently coincided with tp movements.

4. Your concentration area, in which you are likely to spend up to a month will be SARLAB RS 9210 - KOLPUR 0885. My A & Q will give you details and he and CE will also be able to tell you more about the rd and give any help they can.

When your staff have got the details out, let me know how soon you'll be up here complete."

5. Comd 4 Ind Div repeated this to his staff, and told them to get all the infm they could from Corps, while he discussed with the BGS the role of the div after arrival.

The following is a summary of the infm obtained:-

(a) From Q

- (i) Bivouac area bounded by 11 Grid line on NORTH
05 " " " EAST
85 " " " SOUTH
89 " " " WEST

except that area ABDUL KARIM 0688 may not be used.

- (ii) Avoid "pat" as it gets boggy in wet weather.

- (iii) Vehs dispersed to 200 yds between pairs.

- (iv) Trs may be made across the rly line anywhere, but NWR cannot police crossings. Train timings can be had from Station Master QUETTA.

- (v) Water up to 5 gals per man per day is available as follows:-

Pumping Sta 6r 0587
SPEZND rly sta
Mile 7½ 918098

Water must be taken away and washing near these pts cannot be allowed.

- (vi) Sups

Units embus with two days FS non cooking.
2nd line moves full excl fresh sups from SIBI
and thereafter draws from depots in QUETTA.

- (vii) 4 Ind Div will evacuate casualties to CCS QUETTA under own arrangements.

- (viii) Vehs not repairable in div mob wksps will be evacuated to Inf Div Tps Wksp QUETTA.

- (ix) 1 and 2 Ind GP Tpt Coys (type B) report in SIBI 1700 hrs 7 Dec and come under comd 4 Ind Div for move; thereafter revert 1 Ind Corps.

(b) From DAAG (Traffic).

- (i) Rd allotted 4 Ind Div exclusively from 1200 hrs 9 Dec. Adv parties, engrs etc could move earlier if required as there is not much traffic.
- (ii) No area traffic organization exists, though a permanent line has been laid all along the route to which a sector control organization could tee in.
- (iii) 4 Ind Div to report the time up to which they would want the rd.
- (iv) An extra sup of shaded lanterns was being sent to HQ 4 Ind Div at SIBI on 7 Dec for use in night movement.
- (v) After completion of move 4 Ind Div is to be responsible for TC from bivouac areas to incl mile 3-9317 - No restrictions on Civil Traffic without Corps sanction (NB Corps will arrange minimum Civil Traffic during move of 4 Ind Div from SIBI).

(c) From CE

Work on the rd has been going on ever since ops in this area seemed probable.

"The situation on the BOLAN rd is that two engr bns have been working on it for several months. They are at present occupied on the following:-

- (i) Constructing a diversion for the defile at KOLPUR 0885 on the alignment of the track leading over the saddle at 082870 (one inch map). This work is nearly completed, and at a pinch this diversion could be used.
- (ii) Re-cutting the rd in area mile 32 from QUETTA I hope that this will be completed by 7 Dec.
- (iii) Preparing diversions for principal brs of these have been completed.

- (iv) In addition work has begun on regular system of diversions for all parts of the rd where movement off the rd is not at present possible. This work started from the SIBI end and has been completed as far as BIBIKANI U36.
- (v) Tarring and widening the whole of the hill sector, This work is virtually complete.
- (vi) Provision of a pipe line from MACH to a water pt in the vicinity of AB-I-GUM LEVY POST U 3075. This has been completed. Capacity of water pt 6000 gallons.

(Note : Of the above (i), (iv) and (vi) are imaginary and assumed for scheme purposes only.

With this exception student's will report on the rd exactly as they find it. The work detailed in (ii), (iii), and (v) above is in fact being done at the moment by civilian labour, and the state of completion is assumed for scheme purpose is that which actually exists).

"For keeping the rd clear during your move, we will be responsible for the sectors in which the engr bns are at present located - ie SIBI - BIBINANI and HIROK U 18 - KOLPUR. The rest you will have to look after with your own resources."

(d) From G and RA.

AA

"Everything we've got available for AA protection of the L of C is on the rly lines. We have a HAA bty at KOLPUR - another one in the area DOZAN RS and where the gorge opens out about rd mile 33 from QUETTA; also two secs of hy and two of lt guns covering the brs over NARI R, U 8040."

Air.

"There is no point in asking the RAF for F cover for your move. The AOC is told of all big moves, and is well aware of the hy traffic using the BOLAN rd and rly. The F sweeps are in fact largely based on this knowledge coupled with air force intelligence regarding enemy air ops. When you have the timings of your move I'll have them passed on to the AOC.

6. After discussing this infm with his staff div comd issued the following instrs:

"I am going to stay up here for two days. A and Q with SC, sigs and engr reps will recce the new area. The rest of you go back to SIBI tomorrow morning, make a thorough recce of the route, and plan the div move.

Get the div up as soon as you can within reason. They think we might be attacked by air, so work the rd as one way and be prepared for delays due to rd damage, or casualties to vehs.

Allowing

That means a decent safety margin in all your timings - when giving block timings to bdes and div tps give them at least 50% over the net figure from your ready reckoner tables.

Arrange to start main bodies first light 10 Dec, ad parties earlier. We will move by day and by night so get all the traffic lamps you can and use them.

As regards MT to carry tps. I do not want the 15 cwt coys used at all nor do I want any of our 2nd line drawn into the ferry service, as I want to give wksp secs time to get it all into tip-top trim for forthcoming ops. They have not had much time for maint lately.

You may use up to two seccs of 50 Ind GP Tpt Coy (type A) for D maint of the tps which move late if you like, and if they are coming up empty after delivering sups for the move I do not mind your putting tps into them. Except for this you must confine yourself to the two type B coys.

This is bound to involve ferrying, and I'm afraid you'll have to draw a graph - I'll explain to the Corps Comd the extra delay caused by not using our 2nd line in the ferry service.

Work on 18 men per tp carrying 3 ton lorry.

I won't have densities higher than 20 VTM by day or 40 VTM by night. Speeds will have to depend on your rd recce but if it's at all possible work on a minimum of 10 MIH by day and 5 MIH by night.

I do not want dvs to have to go more than six hours without a long halt.

I'll be back in SIBI by 1300 hrs 7 Dec and I shall want to see your recce report and COs for the move. The recce report should incl everything which can help you and bdes in planning, but I don't want it cluttered up with irrelevant verbiage.

7. First light - 0800 hrs
Last light - 2000 hrs.

REQUIREMENTS.

- I. Recce report of the rd SIBI - QUETTA from incl BIBINANI U 36 to incl SARIAB LEVY POST 9108.
- II. Orders (incl movement table and adm paras) for the move of 4 Ind Div from SIBI to QUETTA.
- III. Graph.
- IV. Adm arrangements for the new area in the form of an Appx to the Orders for the move (should incl trace of layout).

NOTES

1. The recce report in Requirement I has been limited to the sector BIBINANI - SARIAB purely for purposes of petrol economy. Notes on the sector SIBI - BIBINANI, sufficient for the planning of the move, are contained in Appx A.
2. Syndicates will leave two students in the Staff College to commence the graph and movement calculations. These should be the G III and DAQMG but syndicate leaders may make changes with DS approval.

In each syndicate three students should do the 'Q' recce for the new area, and the remainder the rd recce. Syndicates have one vch for the rd recce, and one vch for the Q recce.

3. Orders for the rail move of the carriers are NOT required.
4. The trace of layout for the new area will incl tracks to be used, and traces will show clearly which of these tracks exist at present, (ie have been found by recces to exist) and which will be constructed immediately.

W.G.L.
Nov 43.

NOTE ON THE RD SIBI - BIBI NANI.

(This note is NOT a recce report. It is designed to give students the essential information about that part of the rd which they will not have an opportunity to visit).

(All mileages from SIBI).

1. General.

The rd is metalled and tarred throughout.

From SIBI to KUNDALANI R.H U 43 the rd is similar as regards surface, width, and speeds possible, to the stretch SARIAB LEVY POST - KOLPUR.

From KUNDALANI to mile 32 the rd is twisty and gradients increase. This sector resembles the sector HIROK - KOLPUR as regards speeds possible.

(Between mile 30 and mile 33.6 the new rd is on the West of the river, NOT East as shown on the map).

From mile 32 to BIBI NANI the gradients are easy and the rd comparatively straight; the sector resembles the sector BIBI NANI - AB-I-GUM LEVY POST U 37.

2. Bridges etc.

(a) Level crossing at mile 4.3. The rd turns left over the ry and crosses NARI R by a new br not shown on map. Traffic control necessary. Suggest one sec **I.A.A.** necessary in addition to existing **H.A.A.**

(b) KUNDALANI Br (Mile 28.4).

Very vulnerable to air attack, as damage to the br might block the diversion as well.

Suggest one tp **I.A.A.** necessary for protection.

3. Movement off the rd.

(a) Between SIBI and mile 21 vehs can move off the rd anywhere.

(b) Mile 29 - 30. Dispersion areas on both sides of rd for about 200 vehs.

(c) Mile 35 (GOKURTH). Dispersion areas for about 500 vehs to the West of the rd.

(d) Mile 39 - 40.5. Dispersion areas on both sides of rd for about 200 vehs. Unlimited area available in the river bed.

Apart from the above movement off the rd is NOT possible except on the diversions that have been constructed.

4. Water.

There is water in the BOLAN R as far North as GOKURTH U 44.

APPENDIX B

Br classification.

all brs on rd SIBI - QUETTA ar. classified as Class 9 with the exception of:-

- (a) Br over NARI R at mile 4.5 - Class 24.
- (b) Br over GETANI N at mile 57 -Class 12.
- (c) Br over BOLAN R at mile 70.2 - Class 12.

165-Nov 43

Harrison Crawford and Syndicate.

My general impression from studying your solution is that you have put a lot of work and thought into certain portions of it at the expense of others. Parts of this exercise are very well done indeed, but there are about three major reasons why it is not first class.

1. You have attempted to move a div in H.T. over a rd at a speed which could not be maintained. That in itself would have thrown out the whole of your move.
2. You must not pass babis to Corps. It is NOT the job of Corps to org the move of your adp parts for you. You have arranged for over 400 vch to precede the main body. These vchs come from nearly way from and until in the div - you appoint no comds and give no timings and discussions with the command "This under separate orders of 1st Div Corps"
3. You did not obey orders of Corps re dispersion of vchs. Nowhere in your DO. have you laid down dispersion in the new area. nor did you consider it when allotting areas to units

Some of you are not clear about time allowance in moves of H.T. Please re-read the refs I have given to each now by rd

Except for the three major points I have mentioned above and which would, call out any

doubt have led to a 'bog up' the exercise is good.
It is clear and easy to follow, the move is
simple and it is accurate and the exercise has
been well co-ordinated

II

I agree. Do try and ^{just} grasp the method & time allowances
as more before you leave this
place. I find it somewhat
surprising that that we
rec RA should have written to
you.

RD RECCE REPORT

Maps:- $\frac{1}{4}$ in to 1 mile - sheet 34.0 (SIBI)

1 in to 1 mile - QUETTA and Surrounding Country

Route:- FROM BIBI NANI U36 TO SARIAB LEVY POST 9108

Distance:- 48 miles.

Object of recce:- To assist planning for the move of 4th Div
commencing on 10 Dec 43.

Season and weather at time of recce:- Winter - Dry.

Name of commanding offr:- Maj A. J. HOUISON CRAUFORD MC
GII 4th Div.

Date of recce: 6 Dec 43.

PART I - GENERAL REPORT

1. The route

The route is Karmac throughout. It is classed as A1 (A2).
Rd works at present in progress and rd material dumped on
verge make rd unsuitable for two-way working, but vehicles
running singly can pass anywhere except on diversions.

The route is mainly winding with some straight stretches.

From KOLPUR U08 to SARIAB LEVY POST the rd is straight and
level.

AB-1- GUM LEVY POST U37 to KOLPUR is the steepest sector
but gradients are easy and 10 MPH should be possible over them
all.

The rd crosses a few wadies by track br and in some places
jumps along the edge of the bed of R BOLAN. This might
be dangerous in times of spate, but at this time of year
spates are unlikely.

2. The Country

From BIBI NANI to DOZAN U19 the rd follows the course of R BOLAN.
The country on either side is of the barren, mountainous type
typical of BALUCHISTAN and rises steeply on either side of the
rd.

After passing through a narrow defile at KOLPUR and a further defile
at DASHT THANA U9487 (DARWAZA on 1 in map) the rd opens out
into the QUETTA plain and is straight and level to SARIAB LEVY POST.

3. Resources

(a) Parking areas:-

BIBI NANI ✓

AB-1-GUM LEVY POST area ✓

MACH U2782 ✓

HIROK RS U1989 ✓

KOLPUR - DASHT KHANA ✓

Anywhere NORTH of DASHT KHANA ✓

(b) Water:-

BIBI NANI - small quantities. ✓

AB-1-Gum - WP - capacity 6000 galls. ✓

MACH - ample ✓

HIROK RS - " - and at pumping sta mile 67 (from SIBI)

KOLPUR - " ✓

(c) Material for rd rep:-

Adequate supplies along whole route. Dumps of prepared rd metal and top dressing between KOLPUR and SARIAH LEVY POST.

4. Tactical

(a) AA def.

The rd passes through several defiles. There are NOT sufficient AA resources to protect all.

Most likely targets:-

MACH-KOLPUR defile (Corps have one HAA bty at KOLPUR and one at DOZAN RS)

DASHT-THANA (DARWAZA)

(b) Diversions

Diversions exist at all hrs and in certain other places where landslides caused by bombing might block the rd.

(c) TC

A complete sector control org will be necessary

Points requiring special control are:-

MACH-KOLPUR defile

KOLPUR village (narrow street)

Level crossings over Rly at DASHT THANA and mile 92.6 (from SIBI)

Suggest suitable sectors

(d) Speeds

Maximum speeds are considered to be:-

Day - 15 MIH

over all sectors? cf para 1.

Night - 7½ MIH

X

(e) Cables.

Permanent line has been laid along whole route. Sectors
cables can tee in to this line. ✓

Ashland

May

G II

6 Dec 43.

This is a very clear and comprehensive report which would be of value to your comd. I have two suggestions for improvement.

i) Give classification of hrs

(ii) Suggest what you consider an suitable average speeds over the different sectors of the rd by DAY and by NIGHT. Your para 1 suggests 10 MPH should be possible between AB-1 to GOM and KOLPUR. That is approx 8 MIH and I entirely agree but see para 4(d) above and my comments to the mor lat. You have moved at 30 MI 24 and this is much too fast!

A. I would have included speeds recommended over
this sector. This is most important and later
will form the basis of the planning by the
staff for the move.

What is the classification of the br?

Width of rd 20 ft.

B. I think 500 vchs on the high ground is
rather optimistic - I should have said somewhere
nearer 200.

RD RECCE REPORT

Maps :- $\frac{1}{4}$ in to 1 mile - sheet 34.0. (SIBI) ✓
 1 in to 1 mile - QUETTA and Surrounding Country.

Route :- From BIBI NANI U36 TO SARIAB LEVY POST 9108

Distance:- 48 miles.

Object of Recce:- To assist in planning for the move of 4th Inf Div commencing on 10th Dec 43. ✓

Season and weather at time of recce :- Winter-Dry. ✓

Name of Reconnoitring offz :- Maj A. J. Houson CRAVENED MC
 G II 4 Inf Div. ✓

Date of recce :- 6 Dec 43. ✓

PART II - DETAILED REPORT

Mileage based on existing milestones on ground. ✓

Stage	Miles			Rd class	Remarks
	From BIBI NANI	To SIBI	(d)		
(a)	(b)	(c)	(d)		(e)
A	1 ✓	0 ✓	47 ✓	A1 (A2)	BIBI NANI - water available in small quantities Parking areas for unlimited Vehs in beds of R BOLAN and R DARDAN Rd crosses R DARDAN by <u>girder br.</u> Good diversion exists across river-bed. (dry). Engrs should cut through along nala as diversion and make access from rd
			51.5		
	3	50			Engrs should cut diversion along nala to avoid 3 new culverts under curve. ✓
	5	52			Diversion along nala required to avoid dangerous hill slope on right of rd. ✓
	5	52			Existing diversion would need new cutts. ✓
	6.4	53.4			Engrs should clear rubble from 2 completed brick brs which could then be used. ✓
	57]	58.5]			Existing diversion to avoid hairpin bends. ✓
	9	56			AB-1-GUM levy post - water from WP - capacity 6000 galls. ✓ Parking space on either side of rd and in river bed (access from br at mile 10) 500 Vehs on high ground 500 Vehs in river bed. Engrs should cut entrances to parking area
B					

C. I would have nice - gradient down to be 1/20 and up for side 1/5

Gradients generally increase from this pt. and rd is slightly narrower (16-18) ft. Rd winds with occasional sharp bends making continuous two way difficult - though not impossible.

Speeds recommended from this pt to KOLPUR miles
77 - Day 10 M/H, night 5 M/H.

D. Better to give miles from SIBI.

E. Parking for how many vehicles each place? From this pt rd has been widened to full 20 ft but the gradients increase and I am convinced that in convoy you would not do more than 10 M/H.

F. There are some stiff gradients in this stretch, these should be mentioned.

G. There is a very blind corner here you should recommend traffic control.

Stage	Miles			Rd class	Remarks	
	Furn BIBI NANI	Furn SIBI	(a)			
(a)	(b)	(c)	(d)	(e)		
C.	2 ✓	10	57	A1 (A2)	Rd crosses nala on class 12 girder br. ✓ Good 2-way diversion ✓	
	10	57			Erosion diversion to avoid hairpin bends. ✓	
	11.5	58.5				
	13.2	60.2			Steep gradient, but insufficiently long to ?	
	13.8	60.8			Cause resection in MTH possible. ?	
D.	14	61			To or right to MACH. —	
	14.6	61.6			Rd on right to MACH RS. Parking areas in river bed between mile 10 and here. Capacity - 100 vels per mile. - access at mile 10, mile 13.2 and mile 14.5. ✓	
E.	15	62			Water available. Parking areas on camping ground and river bed. Capacity 200 vels.	
	16.4	63.4	A1 (A2)		Division in river bed to avoid class 9 br. Rajas rd at mile 64.1. ✓	
	17	64			Rd crosses river by class 9 girder br. ✓	
	20	67			Water available at pumping sta. ✓	
	22	69			Hirok RS - water available. Parking area for 200 vels. Tengr wks on the necessary. ✓	
F.	23.2	70.2			Class 9 girder br over nala. Good diversion.	
	23.3	70.3			Rly br over rd - clearance 20 ft. ✓	
	24	71			Re-cutting rd in progress. Should be completed by 7 Dec.	
	24.4	71.4			Fish br over nala. —	
G.	25.1	72.1			Low rly br over rd - 12 ft clearance ✗	
	26	73			Class 9 girder br over nala - diversion exists	
					Parking areas in nala - capacity 25 vels per mile. ✓	
G.	26.2	73.2			Large rly br over rd - 12 ft clearance	
	26.6	73.6			Rly br over rd - 16 ft clearance ✓	
	27.3	74.3			Rly br over rd - 25 ft clearance. Parking areas in nala - capacity 20 vels per mile. ✓	
	27.6	74.6			Class 9 br over nala - diversion exists ✓	

Stage	Miles		Rd class	Remarks
	Furn BIBI NANI	Furn SIBI		
(a)	(b)	(c)	(d)	(e)
	29	76	A1 (A2)	Dikurin over saddle at 082870 to by-pass KOLPUR. Nearly completed - can be used if necessary. ✓
	30	77		KOLPUR - narrow street - rd crosses dry tunnel in bad defile. ✓ Street TC required. ✓
4	30.3	77.3	A1 (A2)	Level rd - rd material dumped on rd edge. Not off rd possible. <u>in dry weather</u>
	33	80		DASHT THANA - level crossing over dry - TC required. Defile. ✓ Tr to right leads into part of new dist area.
	35	82		Tr to left and right into new area. Not off rd possible anywhere between here and SARIAB LEVY POST but there are some bad "pat" areas. ✓ Rd in this sector is straight and level ✓
	40.5	87.5		Tr to SPELAND PS - WP. ✓
	45.6	92.6		level crossing over dry - TC necessary but should be arranged by adv party. ✓
	48	95		SARIAB LEVY POST - rd to LAK pass on left. ✓

Major
G II

6 Dec 43.

I should have liked more info on traffic control especially 'bad' places where TCP are required. Also, a note as to your recommendations re AA protection. You had a gunner rep with you, use him where I really disagree with you is over

the speed at which you propose to move
the div, 30 M 1 2H (which incidentally
does NOT appear anywhere in Part II) is too
fast-over country of this nature. The rd rises
2544 ft in 16 miles which is fairly steep when
you consider the ups and downs and the corners
en route. You would be unwise to attempt
more than 20 M 1 2H between MOCH and KOLPUR

Except for this, you have produced a very
good and clear report.

- A. You might have shown 'ground' as a separate
appx if you had wished. In a score of
this nature one frequently finds info of
this type in an appx.

Re the speed at which you have moved
the div please see my remarks at the
end of the Decca Report Part II

4 Ind Div OO No 16 ✓

Ref maps:- 1/4 in sheet 34.0 ✓

1 in QUETTA and Surrounding Country. ✓

INFM

1. Enemy

JAPANESE attack h of C mainly by night raids by individual AC, but with occasional escorted day attacks. ✓

2. Own ops

- (a) 1 Ind Corps is being concentrated in area QUETTA 092 with a view to conducting a counter offensive. ✓
- (b) 1 Ind Corps is providing HAA and LAA at various pts on the rd SIBI U84 - QUETTA ✓
- (c) 1 Ind Corps is providing two engt bns for works on rd ✓

3. Under comd (from) 1700 hrs 7 Dec

1 and 2 Ind GP Corp (Type B)

Revert to comd 1 Ind Corps on arrival in area QUETTA. ✓

4. Ground

A. (a) Rd is A1 (A2), with easy gradients, mainly winding, and passing through a no of defiles. Diversions exist round most bridges and VPs.

(b) Diversion is being constructed for defile at KOLPUR 0885 via saddle at 082870 and can be used in emergency. ✓

(c) Rd is being re-cut in area mile 32 from QUETTA. This may not be finished by time of move, but will not hamper move. ✓

(d) Parking areas exist at:

- (i) BIBINANI U36 for unlimited vechs ✓
- (ii) AB-1-GUM U37 for 1000 vechs ?
- (iii) MAETH U28 for 100 vechs per mile for 4 miles ✓
- (iv) HIROK U18 for 200 vechs ✓
- (v) KOLPUR U08 - BASHT-THANA U08 - unlimited

(e) Sectors for rd maint and, in the event of bombing or landslides for clearing, arranged by 1 Ind Corps are:-
incl SIBI to excl BIBINANI
incl HIROK 2187 to incl KOLPUR. ✓

INTENTION

1. 5. 4 Ind Div will move to new conc area SARIAB RS
9210 - KOLPUR 0885 starting 10 Dec.

- (a) Move under separate orders of 1 Ind Corps
(b) For componn see ^{Veh} Moa Table at Appx B att

3.

8. Allotment of GPTpt.

See Veh Table at Appx B att.

9. Timings and Route

See Moa Table at Appx A att.

10. TE

See Appx C att.

11. Layout in new area

See Appx T att.

12. Embussing areas.

GPTpt as allotted in Appx B will report in units present areas 1400hrs 8 Dec. Tpt allotted to fd coy will remain with them throughout the move.

13. AA

- (a) allotment of AA on route.

(i) 36 LAA Bty less one tp at DARWAZA 0488

good ↗ (ii) One tp 36 LAA Bty at KOLPUR 008

(iii) 37 LAA Bty less one tp area DRANJAN U34

(iv) One tp 37 LAA Bty at KUNDALANI Br U43.

4

- (b) In new area

(i) 36 LAA Bty in area DARWAZA ✓

OO.

- 1 I prefer " 4th Div will move to area SARIAB ~~LEEVOST RS~~
9210 - KOLPOR 0885 between 10 Dec and 12 Dec.
- 2 HQ 1st Corps are at QUETTA and will certainly
NOT accept the responsibility of moving over 400 ods
for you. If you want to get them away before 9 Dec
you will have to get the rd allotted to you for them
move but the 9th should be early enough except for
high units. In latter case the responsibility for
getting them away is yours. I suggest comds
should be appointed, a Rv and a time given in
the new area, and block lining for adv parties of
ops with linings for units such as LAA n engs.
- 3 It would be more logical to combine paras 8 and 12
as both deal with allotment and NOT with embassing.
- 4 Good despatchion, but I would NOT have put
a tp ~~outpost~~ at DRANJAN, I think the BOLAN
PASS is more important. (In any case DRANJAN
was outside the scope of your recce).
- From your dispo's of LAA in the new area
it would be better for OC 3 AA/ATK Regt to contact
the comd of the HAA deployed near KOLPOR. 40 MM
Bofors with a ground range max 3,500 yds won't be
able to do much to assist the airfd and vice versa
even with HAA at the airfd.
- 5 OO signed 1330 hrs 7 Dec. Have these units been
warned? When are the orders for them move?
- 6 You refer to notes from QUETTA in sub paras
thus therefore should read rd QUETTA-SIBI. Mile 53

rd SIBI - QUETTA meas 53 miles from SIBI NOT
QUETTA

Are you working from the 1 mi map? These refs
are very accurate for a $\frac{1}{4}$ mi AND you have
omitted the map letter U.

7. With all the new constr required in the new
area I should not have thought that you could
afford to lock up two fd corps, at least, on
rd maint from 10-12 Dec mil. I suggest
two fd corps should be put on the rd BIBI - NANI -
ITIROK before the move but that before the move
begins one of these should go to the new area.

8. 2nd line ann vchs for LAA Mps, lps should
accompany their unit.

9. You require more detailed orders than this.

During move rec should be confined to clearing
rd and vchs recovered in gaps between move

Rec must be under traffic control org as
they know the situation. Suggest two rec vchs
to each sectn control HQ with the remainder at
SIBI as you have done.

Over rep, I do not like sending all three whsp
corps off together. For one thing I doubt very
much if you can arrange to clear all three
whsp corps at once and for another I don't
think it is the best way. If you had moved
at a slower speed. I would suggest opening
one whsp corp at MACH to reduce the low
for crooks but in this case I'd move either

one or two early to open up in the new area
and leave the remainder to come on later when
the work was finished.

10. This is a long move and serious casualties should
not have to wait long for attention. CPs each with
a MO or SAS should be sited at each sector control
and I think it would be advisable to open an ADS
at some central point - say MACH.
11. Sig diagram appx D shows the only WT connex between
gp (reg?) HQ and sector controls is between reg HQ
and sector control no 1. I think all sector
controls should be in WT connex with reg HQ and
that to facilitate this reg HQ should be
somewhere central such as AB-1-GUM or MACH

14. Eugos

a) move 7 Dec from present location as follows:-

6 2nd Fd Rgt Coy to new Div area
10 2nd Fd Coy " " "
11 2nd Fd Coy " MACH area
12 2nd Fd Coy " AB-1-GUM area.

5.

On 13 Dec, when move of div complete, 11 & 12 2nd Fd Cos move to new area. \times

b) work in new Div area (see trace all at Appx J)

Time table and graph.

1. Your work is neat, well laid out and easy to follow but this move would not work as you have planned it. Loaded three tonnes, 25 phs and such like will not average 30 M/2H between MACH and KOLPUR. The best that you will get is 20 M/2H and that will mean a fairly high standard of driving. Besides this the MGRA in Ind has laid down that the 25 ph is in the 12/8 speed gp. (See ATTM no 17 and Army press). I am quite certain that your time table would have been thrown out of gear within the first eight hours.
2. Please re-read 'Tech note by rd' Chapter 1 paras 4 (a) (d) (c) (d) (g) because I am certain you do not understand the necessity for time allowance within units and BETWEEN units irrespective of any additional time allowance given between BLOCK TIMINGS. Consider vechs in GP I. Bde HQ plus dep by 49 vechs. i.e. 4 gps of 10 and one of 9 vechs. Then say 1E YORKS with 77 vechs say. from another area some distance from Bde HQ. You must allow some additional time to allow this unit to fit into the rd behind bde HQ. This additional time allow is usually 25% of the rd timing fr. the move so that you get - for GP I 392 vechs at 30 M/2H and 20 V/4 require 80 mins to pass a pt. But we must give an allow to units and an allow between units so we add 25% for each. Therefor GP I

requires 80 plus 40 = 120 mins to pass a pt. I have had experience of many moves by MT in India and this is not "hooey", believe me it is extremely necessary. (Para 6 of narrative) ORDERS you to allow 50% in block timings).

3. Be practical. Would you setting in your office truck in SIBI produce a more table like this. By the time you have made copies for pro, serial controls etc you will require some 80 copies of an move order which is three feet long by one foot wide. How will you reproduce this, the largest reproducing machine you have takes 60 seconds!

4. Turnin S.D. Your graph shows short halts as being 10 mins to each even hr. Your div has tracked cameras, therefore, when moving in MT it is trained to halt for 20 mins to each even hour IRRESPECTIVE of whether its cameras are moving with the train or not. If you want to change the length of short halts you must issue orders, otherwise your time table will be upset.

5 Other small pts are
No distribution list - ?

See Order nos, dates etc are filled in. If you don't mark them off people begin to distrust you.

Use correct abbreviations, and when you join your firm see that your clerks use them.

6 You were absolutely right to send part of the div RIAAC Regt and E/15 early and part late.

1862. 21. May. 1862. The
book is written up to date and
will be sent you by express at
the earliest opportunity.

Yours etc.

Veh table

- A. Please see my comment No 2 to OO. At what speed will this unit move up the BOLAN PASS - It contains angle dozers which either move very slowly on their own or in ten ton tpihs which cannot use class 9 hrs. and certainly will NOT be able to travel more than 16 Hrs 24. Clear orders are required on this matter.
- B. 24 GP vechs are necessary to move three fd cosys, provided the CRE cannot spare his pool vechs from the fd ph coy (7, 3 lorries & 4, 15 tons). I would have liked a note to show that you had thought of this.
- C. A GP coy contains 152 vechs of which 120 are load carriers and the remainder spares, HQ vechs and B ech. I would NOT have moved the B ech up and down the QUETTA - SIBI rd with the div but would have parked them, preferably at QUETTA.
In any case 304 vechs do NOT return to SIBI on 11 Dec as you have ordered vechs with fd cosys to remain with fd cosys until the move is ended. OO para 12 and your totals in serial 34.
- D. Whether the jungle fd or AA/ATK regts are self contained in lpt- and require an allotment- apprxm of 10 and 5 vechs respectively from pool lpt- to make them mobile so you have another 15 to find.
- E. Please see note C above
figures are GP V_I Load carriers 90
HQ & spares 32
GP V_{II} Load carriers 135
HQ & spares 32
Total 289

If these 9 are found by the type A coy leaving plus 24 with fil cosys = 304 which is correct

F Please see comment to OO para 17

(a) Reg HQ

1. (i) est at SIBI
2. (ii) found by 3 AA/A TK Regt
- (iii) opens 0600 hrs 10 Dec

(b) Sector controls as below :- Open at 0700 hrs 10 Dec

No	Found by	HQ at	Sector	TCPS	Remarks.
1.	1 E YORKS	SP (Mile 100, rd QUETTA- SIBI)	SP - excl KUNDULANI 4632 ✓	No 1 at level crossing mile 4.3 7939.	TCP will send foot- men to new loc over NBRI R (not shown on map).
2.	2/8 PUNJAB	KUNDULANI	KUNDULANI - incl BIBI NANI 3561	No 2 at PIR CHAUKI 5436.	Will patrol to mile 80.
3.	3 DOGRA	BIBI NANI	BIBI NANI - incl BASUNA 2681	No 3 at KUNDALANI bt 4633 (mile 28.4 from SIBI)	Will patrol to DRANJAN LEVY POST 3950
4.	1 KINGS	BASUNA	BASUNA - <u>incl DIS P</u> (Mile 23) 042882	No 4 at DRANJAN LEVY POST	Will patrol to BIBI NANI
				No 5 at AB-I-GUM LEVY POST 3075	Will patrol to BASUNA.
				No 6 at HIROK 2186 (mile 36 from QUETTA)	Will patrol to mile 30
				No 7 at mile 30 1888	Will patrol to KOLPUR
				No 8 at KOLPUR (miles 26- 0786 from QUETTA)	
				No 9 at DASHT THANA. 0488	
				No 10 at DIS P from OIV	Will patrol from OIV

Where do you report to 1 KINGS?

(c) Intercommis between Reg HQ and Sector controls - by already laid

(i) between Sector Control HQ and TCPS by shaded lanterns and OIR each

(d) Units finding sector controls will draw 30 shaded Camp Card at 0600 hrs 9 Dec. There and return on com

Traffic control

1. See my note to do para 21 I think both batt and units are required between reg HQ and sector control. You hope that if all goes well reg HQ will have little or nothing to do but if the cols are attacked from the air not only is the rd likely to be blocked but the mobile unit bus is apt to disappear if a big bomb bursts nearby. To facilitate control of the move I would have sited reg HQ either at HACHT or AB-1-GOM in some central place.
2. The bts of LAA of this regt are the only units to be tactically employed during the move. Why make them regt batt this m?
3. I agree sector control is essential - I would have had more than you. One at- min 32 from SIBI between KONDALARI and BIBI NANI then BIBI NANI - AB-1-GOM, AB-1-GOM - HIROK HIROK - DisP. With a complete sector control org at the dis P. my experience has been that if a move goes wrong at all it is much more likely to go wrong at the dis P when dis relax a bit, people are slightly tired and everyone wants to get to their area as soon as possible. Unless you have control org there, chaos is likely to result.
4. In a div CO I would NOT detail bus to provide sector controls. It is NOT your job and it may NOT suit them brig. In any case whether it suits the brig or not he is likely to protest as a matter of principle. Any way div COs do NOT go to bus.

Order bds to find as many sector controls as what your composition you require. In the

Selet control cards are probably necessary - so standard do we should do. Issue orders for selet control cards and signs to report to the unit-leading Reg HQ. at a certain time and place.

From your orders I'm not clear what is to happen when the move is concluded. Also for a force of this size you should allot some rd bns - a block bns on 9 Dec would do

From reading the reca report I had no idea that so many TCPs are required. You are perfectly correct to arrange for TCPs if the rd justifies them use

4/ This is info and should hardly appear in an app.

5/ Where will units get blue and white flaps from in the middle of China? A fd Art has only four MCs.

6/ I would have put all about TC in the new area in appx J.

- 4 (e) 1st Corps are arranging minimum civil traffic on rd QUETTA-SIBI
(f) during move of 4th Div from SIBI
Clear the rd sign

Emergency parties such as mot amb and rd clearance parties will be preceded & by a OR flying a blue and white checked flag. On seeing this flag all vechs will immediately pull into the side of rd. to facilitate quick passage.

5 (g) TC after completion of move

- (i) Units are responsible for TC within own areas
(ii) ~~Attack~~ Units will display unit signs as per Div Standing Orders para 36(2)

6 (iii) Div Pro will:

(1a) ~~to~~ police WPs

(1b) est TCPs at ..

 mile 3
 mile 16
 mile 23 } rd QUETTA - KOLPUR

(1c) patrol rd QUETTA - KOLPUR between miles 3 and 23.

A. Why not open AP in the 2nd line LPT area - insist
on getting a large area to enable you to do this
Your holding of LAA arm is colossal. It represents
600 RPG or an equivalent of 20 days expenditure
under fairly intensive air attack. The FFC
rates for LAA are about 20-25 RPG per day.
